Architecture

The ApiCode Architecture is illustrated below. And, its components are explained at a high level in later sections followed by the diagram:

Java Adapter : Key Component in the ApiCode framework. It interacts with ApiCode and converts the Java In/Out objects into XML for integration with DBSync Core Engine.

DBSync SDK : SDK Platform for building the Custom ApiCode and deploying the same in the DBSync Platform.

DBSync Core Engine: The Core Engine of DBSync Platform that works with XML Input/Output based on the Source and Target mapping defined.
