

Integrating CUSTOM FIELDS From Salesforce with CUSTOM FIELD IN QuickBooks Online

Issue: Mapping Custom field of Salesforce to Custom field of QuickBooks.

Root Cause: Requirement - mapping Quickbooks online custom field.

Solution:

Let us take an example of custom field **SalesRep__c** on Opportunity in Salesforce.

We have to map this field to **SalesRep** custom field in QuickBooks online. This is created in sales section as shown in the following screen shot:

Name	Internal	Public
ProjectNumber	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
SalesRep	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

To map this field, choose any one of the fields that is not used for mapping any values. Then, type custom field name (SalesRep) in the target area i.e between <Name> </Name> tags (QuickBook Online) and add the following query in the source field.

```
{  
  ADDXML("<CustomField><DefinitionId>2</DefinitionId><Name>SalesRep</Name><Type>StringType</Type><StringValue>" + VALUE("SalesRep__c") + "</StringValue></CustomField>");  
  return "";  
}
```

Where <DefinitionId>2</DefinitionId> :Position of custom field in QuickBook online.

<Name>**SalesRep**</Name>: The custom field name in QuickBook online.

<StringValue>" + VALUE("SalesRep__c") + "</StringValue>: The custom field in Salesforce.

DepartmentRef

Deposit

```
{
  ADDXML("<CustomField>
    <DefinitionId>2</DefinitionId>
    <Name>SalesRep</Name>
    <Type>StringType</Type>
    <StringValue>"+VALUE("SalesRep__c")+"
  </StringValue></CustomField>");
  return "";
}
```
