

Getting started

Overview

DBSync is a complete, On-Demand and integration provider that empowers companies to connect any combination of SaaS, "On-Cloud" and "On-Premise" applications without having to install or maintain software.

Getting started with the DBSync platform is easy - even if the user is not tech savvy. Designed by a team of seasoned professionals it is scalable for end users to connect , build and deploy integrations all by themselves. The DBSync solutions enable companies to connect "Cloud to Cloud" or "Cloud to On-Premise" applications quickly to solve any integration problems.

Users can use the pre-defined solutions to streamline business processes such as order to cash, procure to pay, service to cash, payment integration or integrate cloud applications with the company databases.
