

Cc Email and Bcc Email Fields in QuickBooks online are not syncing

Requirement:

As the "Minor Version" field is not provided with an appropriate value in DBSync, the Cc Email and Bcc Email Field will fail to sync

Solution:

Need to provide the "Minor Version" in DBSync. Below mentioned are the steps for providing the Minor Version.

1. Open the process SFQB_OpportunityToInvoice.
2. Click edit next to the OpportunityToInvoice rule.
3. Update the Minor Version as 8 as shown below.
4. Save the workflow once the minor version is provided.

The screenshot shows the configuration interface for a workflow rule. At the top, there are navigation links: 'QuickBooksOnline', 'Insert', 'Invoice', and 'Using Map'. A 'Less' link is also visible. Below these is a 'Properties' tab with a green checkmark and the text 'Update Source'. The main area is divided into two columns: 'Target Properties' and 'Update Source Properties'. Under 'Target Properties', there are four rows: 'Minor Version' with a text input containing '8', 'Auto Create' with a dropdown menu showing 'true', 'Batch Size' with a text input containing '1', and 'Primary Key(s)' with an empty text input. Under 'Update Source Properties', there are two rows: 'Batch Size' with a text input containing '1', and 'External Id' with an empty text input.

Target Properties		Update Source Properties	
Minor Version	8	Batch Size	1
Auto Create	true	External Id	
Batch Size	1		
Primary Key(s)
