APIServer

Beta Release
This is part of our Beta Release. Please contact our sales team if you are interested in participating in this Beta Release.

Introduction

DBSync cloud API server platform provides an easy to use Java based API development environment. This takes care of most of the common requirement and functionalities needed for API development. As a result, it enables you to focus on "developing" your APIs. We aim (1) to not only provide a platform for the developers - where they can quickly build APIs and deploy - but, (2) also share a list of APIs to perform common tasks. These APIs are built based on our past experience in dealing with large clientele. It is comprised by curating most common use-cases.

Who should use it?
- **Application Service Providers**: Needs integration capabilities without the overhead of managing such an effort.
- **Developers**: Wants to build integration and monetize their work by providing it to their customer base.
- **Enterprise Architects**: Wants to provide an iPaaS experience to their internal clients.

Features

- **Adapt Faster**: Enables developers, Service providers, and Architects to easily build and deploy APIs securely. And, to do so quickly with zero touch point.
- **Rest Enabled**: All exposed APIs from our list are rest APIs - easy to consume with your web, mobile, IOT and other applications within minutes.
- **Multi-version**: Complete API lifecycle management using built-in version control.
- **Deploy Anywhere**: Write once, deploy anywhere - either on our API server; or, on your own server.
