

SkuVault Connectors

Overview

DBSync's SkuVault connector is a highly customizable connector. It has the ability to connect your SkuVault account with additional applications - like Accounting software, E-Commerce platforms, and various CRM systems. The Skuvault connector enables you to move data in, and out of, the SkuVault Warehouse Management System. Using DBSync's SkuVault connector, the customer can directly connect to SkuVault Warehouse Management System. This will allow a user to query, add, modify and delete various types of records - including Items, Vendors, Sales order, Purchase order and much more. The connector uses the SkuVault API to move data in, and out of, SkuVault. Integrating with SkuVault consists of REST calls using a JSON request/response made over an HTTPS connection.

Prerequisites

To establish a connection to SkuVault warehouse management system, via a DBSync SkuVault connector, user must:

- Have a valid license to DBSync SkuVault connector, username and password to connect to DBSync iPaaS platform.
- Have a valid username, password, URL to access SkuVault API.
- Be sure that SkuVault user has privileges to connect to SkuVault APIs.

Connector Configurations

A SkuVault connector instance represents a single SkuVault account, including login credentials. If a user wishes to connect to multiple instances of the either sandbox/production then s/he must create a separate connection for each and configure the URL accordingly. The table below represents parameters required for opening the connection to SkuVault user instance.

Property	Description	Required
Username	The username to connect to Skuvault warehouse management system.	Yes
Password	The password to connect to Skuvault warehouse management system.	Yes
Base URL	The specific URL to connect to the user instance of the SkuVault.	Yes

After a connector is created within a project, set up the connector within the process. DBSync can then map to, and from, virtually any system using the Skuvault connector to retrieve data from, or send data to, Skuvault warehouse management system.
