

Release 6.2.2

Effective Release Date: **May 30th, 2019**

Release Notes:

- [Enhancements](#)
- [Minor Fixes](#)

Enhancements

1. OData common support for replicating from Source to DB
2. Auto log deletion parameters added (More Information: [Cron- functionality](#))
 - **log.maxcount=6000**
 - **log.cleaner.cron=000**?**
3. For OData Connector, Need to differentiate between replicable and non-replicable objects in Advanced settings page (As it is in Salesforce)
4. MSCRM s3 functionality, In delete records for .csv file header is not visible.

Minor Fixes

- MSCRM Deleted Record Id's contains (00000000-0000-0000-0000-000000000000) issue is resolved now.
- Odata- (MS Nav) on Object page available fields are now showing, earlier it was not showing the fields.
- Odata- Logs screen showing all the objects at the time of run one single object, and command running successfully after the second attempt.
- The issue with online license check is working fine now.
- Common OData issue with created on and modified on fields are resolved.
- MSCRM Advanced settings page saving all the details like email etc.
- Thread rename by profile/command name attaching itself every time when reading from source.
- Connection issues when the custom domain is used to connect with Salesforce.
- Overriding Database's Datatypes using default is not working, now this issue is resolved and working fine.
- Backward compatibility for Batch mode command is working fine.
- Single Quotes not preserved properly adding the addition of two double quotes for S3 Adapter.
- Enabling global setting of log.dir props (system props).
- When selecting over 200 objects, the Log viewer fails.
