

Release 6.5.3

Effective Release Date: Nov 19th, 2019

Release Notes:

Enhancements

- Major Enhancement is Upgrade Utility. Customers can upgrade to new releases in Cloud Replication with the help of Upgrade Utility.

Minor Fixes

- Email on error not working when a source credentials are incorrect.
 - Getting an mail when email on an error in Web API is false and True.
- Enhanced Error reporting with three dropdown menu like Severe, Warning and Info.
 - If there is an error, then it will show in the logs table with extra column message for error details like (type_c, level_c, and related_sync_id_c).
- Export validation page restricts to selected all dependence objects when only one parent and child object is selected. Now, this issue is fixed and working fine.
