

# Frequently Asked Questions

- **What differentiates DBSync from its competitors in the integration space?**

DBSync is a complete on-demand integration and replication provider that empowers companies to connect any combination of SaaS, cloud and on-premise applications together without the burden of installing and maintaining software and appliances. DBSync is a tool that was used to integrate Salesforce and QuickBooks - to iPaaS, with many other connectors list. We meet our client needs and expectations in various segments, by consistently adding new connectors to our list. We have robust in-house delivery and support teams. The teams take pride in supporting client needs without undue follow-ups. For feedback and reviews of our clients are available on Salesforce Appexchange.
