

Create Invoice Line Item from Opportunity Header Field

Salesforce to Quickbooks Desktop

Here If we want to send Shipping and Handling(Shipping_Handling__c) of 200 \$ as a invoice-lineitem in Quickbooks then follow the below steps

SOLUTION :

Go to Opportunity To Invoice process in DBSync and in the Invoice insert rule add the below mappings in the validate row:

```
{
String POAmt = VALUE("Shipping_Handling__c");

String valueAfterDecimal[] = POAmt.split("\\.");

if(LEN(valueAfterDecimal[1]) > 1){

Else
{

POAmt=VALUE("Shipping_Handling__c")+ "0";

}
LOG("Amount"+POAmt);

ADDXML2SOURCE("OpportunityLineItems","<records><PricebookEntry><Product2>

<Name>Shipping and Handling</Name><Description>This is a shipping and handling

charge</Description></Product2>

</PricebookEntry><Quantity>1.0</Quantity>
```

```
<UnitPrice>"+POAmt+"</UnitPrice></records>");
```

```
LOG(GETSOURCEXML2STRING());
```

```
return IF(ISEMPTY(VALUE("AVSFQB__Quickbooks_Id__c")), "true", "false");
```

```
}
```

And also we should remove the mappings for SFLINEID in the same rule, Go to InvoicelineAdd and remove the mappings for DataExt for SFLINEID. And Save
