

12. File Replication

- [Enable and Run File Replication](#)

DBSync File Replication is useful to download the files of Salesforce attachment, document, content & chatter feed into specified directory. Enabling & Running File is explained in this section.

Features

- Download the files from Salesforce *attachment, document, content & chatter feed* into specified local directory.
- Compatible with *Windows* as well as *Linux*.
- Choose *Clean Copy* or *Incremental* Download.
- Enable *File Version* for Download.
- Uses only SOAP API during File Replication.
