9. Key Features

DBSync Cloud Replication functions with the variety of features to provide a convenient mode of Replication.
DBSync Cloud Replication allows selecting only the required objects and fields to replicate. It facilitates database to source apps synchronization using control flag (do_sync_flag).

Replication event notifications can be received via e-mail and these events can be logged in the database as well. Replication can be scheduled as per the requirement.

Get Started

Let's get started to explains the steps by steps process involved in all the key features mentioned below.
