# Value too long for type character varying(100)

**Value too long for type character varying(100)**

***Issue :***
If picklist has the value more than 100 characters in the salesforce then DB does not allow you to insert the record. As in database picklist fields will be created as character varying(100) in database.It will not accept more than 100 characters.

***Error in the tomcat/logs:***
*NULL,NULL,NULL,'0055w00000AjV5a','00Q5w00001mRS5dEAG',NULL,NULL,NULL,NULL,NULL,NULL,NULL) was aborted:* **ERROR: value too long for type character varying(100)** *Call getNextException to see other errors in the batch.*

***Solution:***
In order to troubleshoot this issue please follow the below steps:

1. Edit the ***system.properties*** file located at *<<install-dir>>\dbsync-cdm\WEB-INF\db\conf* and set the property ***alter.schema.size*** value to ***false*** and ***alter.schema.override*** to ***true***.
2. Edit **<<Database>>.properties** located at *<<install-dir>>\dbsync-cdm\WEB-INF\db\conf*

and uncomment **picklist.default** and set to **varchar(765)**

1. Restart the tomcat and then drop the table if it is already existing in the database.
2. Run the update schema and incremental or run the clean copy.
