Configure Email Notifications Settings

Receive Notifications

Click the check-box next to the desired event options. There are 3 main event options that can be configured are shown in the image below:

Receive Notification When	Process	Started	Completed	Errored
	Object	Added	Updated	Removed
	Field	Added	Updated	Removed

- a. Started- Click the check-box next to the icon 'Started' if you wish to be notified when a process is started. For eg: If you enable this option you will be notified when a process such 'Clean Copy', 'DB to Source' etc starts running.
- b. **Completed** Click the check-box next to the icon 'Completed' if you wish to be notified when a process is completed. For eg: If you enable this option you will be notified when a process such 'Clean Copy', 'DB to Source' etc completes.
- c. **Errored** Click the check-box next to the icon 'Errored' if you wish to be notified when error arrears in the process or the process fails. For eg: If you enable this option you will be notified when a process such 'Clean Copy', 'DB to Source' etc encounter errors or fails.

• Object

- a. Added- Click the check-box next to the icon 'Added' if you wish to be notified when any new object is detected in your Source or Database. For eg: If you enable this option you will be notified when any new object such as 'Account', 'User' etc is detected on your Salesforce or your Database instance.
- b. **Updated** Click the check-box next to the icon 'Updated' if you wish to be notified when any change in the object is detected in your Source or Database. For eg: If you enable this option you will be notified when any change in the object such as 'Account', 'User' etc is detected on your Salesforce or your Database instance.
- c. Removed- Click the check-box next to the icon 'Removed' if you wish to be notified when an object is removed/deleted from your Source or Database. For eg: If you enable this option you will be notified when an object such as 'Account', 'User' etc is removed or deleted from your Salesforce or your Database instance.
- Fields
- a. Added- Click the check-box next to the icon 'Added' if you wish to be notified when any new object field is detected in your Source or Database. For eg: If you enable this option you will be notified when any new object (Account) field ('Billing Street'), (Billing City) etc is detected on your Salesforce or your Database instance.
- b. Updated- Click the check-box next to the icon 'Updated' if you wish to be notified when any change in the object field is detected in your Source or Database. For eg: If you enable this option you will be notified when any change in the object (Account) field ('Billing Street'), (Billing City) is detected on your Salesforce or your Database instance.
- c. **Removed** Click the check-box next to the icon 'Removed' if you wish to be notified when an object field is removed/deleted from your Source or Database. For eg: If you enable this option you will be notified when an object (Account) field ('Billing Street'), (Billing City) etc is removed or deleted from your Salesforce or your Database instance.
