

Projects

Project Listing

A project is a collection of processes and workflows. It contains a set of instructions for pulling data out of source systems and placing it into Target Systems.

The following screenshot illustrates the projects belonging to the logged-in user - Created or Imported.

.

Create, Edit and Delete Project

To create a new project - "**Create New Project**"-

1. Enter a preferred **name** and "**Save**" to view the project on the **listing page**.
2. "**Edit**"- To **edit/change** the project name.
3. "**Delete**"- To Delete the project and all of its components from the system. ***Once deleted, a user will not be able to recover projects, or any of its components, from the system.***
4. "Download"- Download the project in a zipped format in the Downloads folder of the local file system.

Import Project

DBSync supports two ways to import a project:

.

1. "Choose" From Existing project" - Select a zipped file from the local system. The new file will replace the existing project.
2. "Create New Project"- Choose a zipped file from the local system and click on import.
3. Cancel to exit out of the Import Project process.
