Retrieve value from custom field of QuickBooks Online

The process of retrieving value from custom field of QuickBooks Online is discussed below with the example.

Syntax:

TargetField **>** VALUE("CustomField[Name='Custom_Field name']/StringValue").

Let us take an example of custom field **SalesRep** in Invoice of QuickBooks Online. To retrieve the value of this field and to insert in the Target field **Salesrep__c** of Salesforce Opportunity.

TargetField should be **Salesrep__c.**

The query to retrieve the value from custom field SalesRep should be:

VALUE("CustomField[Name='SalesRep']/StringValue")
